# Analyse exploratoire et nettoyage de name, basics

Cette table va être utilisée pour les informations qu'elle apporte et non pour le machine learning.

\*\*A l'issue de l'exploration et du nettoyage, 2 tables seront créées : 1 table info\_acteurs et 1 table info-films

#### Introduction

Les étapes suivantes visent à analyser, nettoyer et préparer la table name.basics pour une utilisation ultérieure. Nous allons examiner chaque colonne, effectuer les transformations nécessaires et proposer des recommandations pour les prochaines étapes.

```
In [1]: import matplotlib.pyplot as plt
import seaborn as sns
import numpy as np
import pandas as pd
```

## Étape 1 : Chargement des données

```
In [26]: # Importation du DataSet :
    df_name_basics = pd.read_csv('../gitignore/name.basics.tsv', sep= '\t')
```

#### Aperçu rapide des données

# Étape 2 : Exploration et Nettoyage des données

#### Aperçu rapide des données

```
In [28]: df_name_basics.head()
```
